

For Treasury Clients

Effective from 29th of April 2019 until further notice

The Bank offers the following list of services for the clients of the Treasury under the following conditions. The Bank accepts orders from these Clients via the following channels: phone and certain electronic platforms (Reuters, Bloomberg, FX Raiffeisen).

Raiffeisen Bank Ltd. has determined its guidelines on investor based advisory services in accordance with Act CXXXVIII of 2007 on 'Investment Firms and Commodity Dealers, and on the Regulations Governing their Activities' that in case its retail clients are satisfying the applicable legal conditions they may request their re-categorization as professional client. The Bank's Treasury Department supports investors categorized as professional clients with advisory services in shaping their business decisions. Information and respective documents on the re-categorization are available at:

https://www.raiffeisen.hu/documents/10423/194660/atsorolasi_kerelem_lakossagibol_szakmaiba_maganszemely.pdf

https://www.raiffeisen.hu/documents/10423/194660/atsorolasi_kerelem_lakossagibol_szakmaiba_nem_maganszemely.pdf

The Treasury terms and conditions are part of the „Framework Agreement For Exchange-listed and OTC Spot and Derivative Transactions and Structured Deposits” (Treasury Frame Agreement) which was concluded between the Client (Treasury Client) and the Bank. The terms and conditions apply also to any transaction which was concluded directly with the Treasury before the 1st of February 2008.

The applicable fees for Treasury Clients having „Framework Agreement For Exchange-listed and OTC Spot and Derivative Transactions and Structured Deposits” (Treasury Frame Agreement) with the Bank shall be determined by their Treasury Frame Agreement and the all-time valid Treasury terms and conditions. In case of Clients not having valid Treasury Frame Agreement with the Bank, nevertheless taking investment services from the Bank's Treasury Department (Money- and Capital Markets Department) the applicable fees shall also be determined by the Treasury terms and conditions, having regard to the fact that in respect of any other conditions except the fees of such order, the respective agreement on investment and ancillary services valid between the Bank and the Client shall be applicable.

The Bank hereby informs its Clients that as of 15th January 2019 the Bank's Treasury Department (Money-, Exchange- and Money Market Department) shall render investment and ancillary services solely for Clients (i) having valid full MiFID test including suitability and appropriateness tests and (ii) classified as non-retail clients based on the by-laws of the Bank.

Available products (financial instruments) and their fees, costs for Treasury Clients (Detailed description of these products can be found in the Treasury Guidebook in Hungarian language): www.raiffeisen.hu/treasury-utikalauz

Foreign Exchange Option - Opening/Closing a position	250 HUF	-
Position Transfer (transferor bears the charges)	200 HUF	-

Preconditions for concluding prompt equity transactions:

- In the case of purchase: available free cash balance in currency of the deal at Client's securities account
 - In the case of sale: available free securities balance at Client's securities account
- In case of secondary trading of non-exchange traded certificates issued by Raiffeisen Centrobank orders are placed as fill-or-kill orders: an order can be executed only if total order size is filled. If immediate execution of the total order size is not possible at the time of order routing to Raiffeisen Centrobank, the order will be cancelled.
- The initial margin/collateral is always twofold of the collateral required by KELER Zrt. or the Foreign Exchange. The initial margin is blocked by the Bank without specific consent from the Client on the Client account from the available cash and/or securities which are eligible for Keler Zrt. or the Foreign Exchange. The Client is entitled to initiate an exchange between the collaterals subject to retaining the total value of collaterals. In case of futures transactions on foreign exchanges the margin has to be provided in cash in the currency determined by the exchange.

For the futures transactions in the derivative section of Budapest Stock Exchange the Bank applies the following rules:

- In case of single stock future transaction if the Client did not dispose of his position otherwise until 4.00 pm. on the expiration date of the given product then the Bank has the right to close the open positions after 4.00 pm on the expiration date on the prompt market of Budapest Stock Exchange.
- In case of index futures if the Client did not dispose of his position otherwise until 4.00 pm. on the day before the expiration date then the Bank has the right to settle the open positions at the settlement price at expiration.
- In case of foreign exchange futures if the Client did not dispose of his position otherwise until 10.00 am. on the expiration date then the Bank has the right to settle the profit or loss at the settlement price at expiration of the contracts (fixing of National Bank of Hungary).

The Bank applies the method explained below when calculating futures prices for currency futures transactions executed in the derivatives section of BSE.

Clients limit orders accepted by the Bank for any given size and price are directed to, and executed in prompt market. By giving an order the Client takes liability to do a futures deal in the volume of the filled contracts. Based

on the transacted spot market price and other relevant market conditions (interest rates) at the time of the transaction the Bank generates futures bid/ask prices for the Client. Futures transactions will be settled using the calculated futures prices. Unless Client instructs otherwise, in case of futures transactions until market close on the Wednesday that precedes the expiry week, the Bank opens positions using the nearest futures contract. Following the Wednesday that precedes the expiry week, the Bank opens positions using the second nearest futures contract

The Bank applies the method explained below when calculating futures prices for single stock futures transactions executed in the derivatives section of BSE.

Client orders accepted by the Bank for any given size and price are always directed to, and executed in the Equities section (spot market) of the BSE. By giving an order the Client takes liability to do a futures deal in the volume of the filled contracts. The Bank considers one contract of futures transaction filled only if the number of shares purchased or sold through the aforementioned spot market transaction reaches the size of one contract as specified by KELER on the day the Client order was accepted. Partial fills, where the number of shares purchased or sold through the aforementioned spot market transaction fall short of KELER requirements, will not be accepted by the Bank. Based on the transacted spot market price and other relevant market conditions (financing costs, borrowing fee) at the time of the transaction the Bank generates futures bid/ask prices for the Client. Futures transactions will be settled using the calculated futures prices.

- Opening a short position:
 - Active contract: Until market close on the Wednesday that precedes the expiry week, the Bank opens short positions using the nearest futures contract. Following the Wednesday that precedes the expiry week, the Bank opens short positions using the second nearest futures contract
 - Futures price: The spot market price less the borrowing fee.
 - In case the underlying stock pays dividend and the amount of dividend was announced and approved by the company Annual General Meeting (AGM) before the futures position opening; furthermore the actual dividend payment is arranged after the future position opening but before the futures contract expiry, the amount of dividend will be subtracted from the calculated futures price.
 - In case of day trade (futures position opening and closing during the same trading session) Clients compensated through closing futures price adjustments for borrowing costs incurred during position opening.
- Closing a short position:
 - Unless Client instructs otherwise, in case of multiple short positions the Bank will close the open position with the earliest trade date.
 - Futures price: equals to the spot market price
 - In case the underlying stock pays dividend and the amount of dividend was announced and approved by the company AGM before the futures position opening; furthermore the actual dividend payment is arranged after the future position opening but before the futures contract expiry, the amount of dividend will be subtracted from the calculated futures price. In case dividend is not approved by the AGM prior to position opening but is eventually paid between position opening and closing then futures closing price is to be increased by the amount of dividend-per-share.
 - In case of day trade (futures position opening and closing during the same trading session) Clients compensated through closing price adjustments for borrowing costs incurred during position opening.

- Opening a long position:
 - Unless Client instructs to use a closer contract, the Bank will open long futures positions with 3-month expiry.
 - Futures price: Spot equity price adjusted for financing costs (cost calculated using the interest rate for the relevant tenor as well as a one-off cost item (0,2%), covering the spread between deposit and lending rates)
 - In case the underlying stock pays dividend and the amount of dividend was announced and approved by the company AGM before the futures position opening; furthermore the actual dividend payment is arranged after the future position opening but before the futures contract expiry, the amount of dividend will be subtracted from the calculated futures price.
- Closing a long position:
 - Unless Client instructs otherwise, in case of multiple long positions the Bank will close the open position with the earliest trade date.
 - Futures price: Spot equity price adjusted for financing costs calculated for the remaining life of the contract ensuring that the adjustment can not exceed the pro rata (calculated for the remaining life of the contract) financing costs using interest rates as of the opening of the position.
 - In case of day trade (futures position opening and closing during the same trading session) financing costs calculated for the closing leg of the transaction equals to the cost of the opening trade.
 - In case the underlying stock pays dividend and the amount of dividend was announced and approved by the company AGM before the futures position opening; furthermore the actual dividend payment is arranged after the future position opening but before the futures contract expiry, the amount of dividend will be subtracted from the calculated futures price. In case dividend is not approved by the AGM prior to position opening but is eventually paid between position opening and closing then futures closing price is to be increased by the amount of dividend-per-share.

In case of the underlying stock pays dividend and open position is settled with physical delivery:

- Physical delivery of short position: in case dividend is not approved by the AGM prior to position opening but is eventually paid between position opening and maturity, the Bank is entitled to the amount of dividend-per-share.
- Physical delivery of long position: in case dividend is not approved by the AGM prior to position opening but is eventually paid between position opening and maturity, the Client is entitled to the amount of dividend-per-share.

In case of futures transactions on foreign exchanges where at maturity the contract is settled with physical delivery (not with financial settlement) the Bank has the right to close the Client's open position on the exchange after 16.00 pm (Budapest time) one day before the last trading day of the contract.

In case of non-exchange traded (OTC) foreign exchange and interest rate transactions (FX forward, cross currency swap – CCIRS), OTC FX option when the Client is the option seller, forward rate agreement (FRA), interest rate swap (IRS) and interest rate options (cap, floor) when the Client is the seller of the option) the initial limit requirement is determined by the maturity, currency(s) and the notional of the transaction. The Bank can execute non-exchange traded (OTC) transactions if a so-called 'derivative limit' was setup for the Client. The Bank has the discretionary right to setup, modify and to cancel this derivative limit.

In case of spot OTC transactions the Client has to have 100% coverage available. If the spot transaction has a value date of T+1 or T+2 than the Bank can setup a so-called 'settlement limit' when the Client has to cover this account only for the value date of the transaction.

If one leg of the currency-pair on the OTC market is a NDF (Non-Delivery Forward), then the forward or option deal cannot be delivered, so at least two days before maturity (T-2) the position must be closed. These kind of currencies are - including but not limited to - , the gold (XAU) and the Indian Rupee (INR).

In case of foreign exchange OTC structured products which are combination of several derivative transactions the Client has to have available limit for the sum of the limit requirement of every component of the structure where the Client has an obligation.

Collateral, limit requirement of a Firm order¹ equals the collateral, limit requirement of the transaction. The fulfilment of firm orders is always based on the prices quoted by Raiffeisen Bank Zrt.

If the currency denomination of the forward or option deal and the margin differs then the Bank requires additional collateral. The extra margin requirement is 12% of the notional.

On top of the initial margin need further variation margin requirement can become necessary in case of all other kind of deals for the position maintenance according to the Treasury Framework Agreement.

Coverage of Friedrich Wilhelm Raiffeisen Private Banking clients' prompt securities purchase transactions – for settlement day payment *	
Sufficient coverage of the transaction	100 %
Under-coverage threshold**	90 %
In case of over-coverage, threshold of collateral release	200 000 Ft

*Settlement day payment = the purchase price in the settlement currency is paid only on the settlement day, instead of the trade or order date. The table above refers to the transactions of the main account. Long-term investment account and Stability savings account settlement daily payment transactions with a special locking security deposit is not required.

**In case the collateral coverage is under the threshold, the Bank contacts the client, and call for additional collateral. If the client does not meet the margin call, the Bank may close the position by an opposite-direction transaction according to the "Framework agreement for exchange-listed and OTC spot and derivative transactions, and structured deposits" contract.

Method of calculating the coverage ratio:

$(\text{value of collateral} + \text{market value of the securities}) / (\text{sufficient coverage})$

- The sufficient coverage is determined by the sum of the purchase price and the settlement risk.
- The collateral value is calculated by the market value of the blocked assets and by the hair cuts, which is listed in the annex of the Treasury Terms and Conditions calculates with a 30% currency buffer, except the collateral and the transaction are denominated in HUF.

In case of paying on settlement day, the Bank accepts cash, bond and any product, that has a value listed in the annex of the Treasury Terms and Conditions, as collateral. The customer has the option to personally select the products to be reserved as collateral. If the customer does not want to select personally, the Bank will reserve collateral according to the following order:

1. Government securities (first with the longest duration)
2. Discount treasury bill (first with the longest duration)
3. Interest-bearing treasury bill (first with the longest duration)
4. Shares/certificates listed on BSE
5. Foreign currencies (in alphabetical order, except TRY,GBP,CHF,USD,EUR,HUF, which come last)

In the case of sell orders concerning financial instruments, the Bank shall use the FIFO method for the settlement of the transaction, unless the customer opts for the manual matching method. Manual matching may be used in respect of the following deal types: stock exchange sell orders for Hungarian and foreign equities, bond sell orders, redemption orders for investment certificates, blockage of securities upon the customer's order and the release of blockages, in-house securities transfers between the customer's own accounts.

In the case of spot, forward and flexi forward transactions any amounts denominated in Hungarian Forints (HUF) payable by or payable to the Client, the Bank shall be rounded up or down into whole Forints according to the general rules of rounding.

The Bank reserves its right to deviate from the fees, costs, collaterals, limits and margins listed in the Treasury Terms and Conditions.

The list of acceptable collaterals is listed in Annex 1.

Treasury Terms and Conditions

Default interest:

- In case of HUF it is twice of the central bank base rate.
- In case of foreign exchange currencies it is the reference base rate of the given country + 6%.

Tenor of term deposits: single case agreement.

Taxation: the Bank makes deductions from the income of Client's transactions according to the tax laws, thus mainly the personal income tax act (CXVII. Act of 1995), the health care contribution act (LXVI. Act of 1998) and the rules of taxation (XCII. Act of 2003).

In accordance with the provisions of Act 2396/1996 passed by the Parliament of the Hellenic Republic, segregated sub-accounts must be opened at the Greek clearing house for the holders of securities traded on the Athens Stock Exchange.

Trades concerning such securities may be made only for those customers of ours with Treasury framework agreements who have consented in writing to the opening of the segregated sub-account by providing their data necessary for the account opening.

¹ Description of firm order can be found in Treasury product description or in the Treasury Guidebook in Hungarian language. Available at: <https://www.raiffeisen.hu/treasury-utikalauz> or ask your account manager for it.

The list of acceptable securities behind treasury transactions and their offsetting values are included in this list of conditions set out in **Annex No. 1.**

The Bank provides further detailed information on the costs related to the investments services and products using ex-ante sample cost calculation set out in **Annex No. 2.**

The Declaration for the Opening of Securities Account for Securities Traded on the Athens Stock Exchange is available as **Annex No. 3** to this List of Terms & Conditions.
